About

Multidisciplinary Computer Engineering graduate highly motivated to build a career in **IT Risk, Assurance, and Business Process Auditing**. Possesses hands-on expertise across **Cybersecurity, Enterprise Data Infrastructures, and System Architecture**. Adept at analyzing complex software workflows, establishing secure networking protocols, and enforcing strict data governance. A self-disciplined fast learner equipped with excellent communication skills to collaborate within top-tier corporate teams, bridge technical infrastructure with business priorities, and deliver measurable impacts.

Education

Marmara University Istanbul, Türkiye
Computer Engineering — GPA: 3.21 2022 – 2026

Experience

Part-time Data Engineer September 2025 – Present
Brisa Bridgestone Sabancı, Istanbul

- Engineered **ETL** pipelines to process and structure **300,000+** rows of operational data into a **Lakehouse**.
- Integrated enterprise data using **SQL Server** and modeled reporting logic interacting securely with **SAP BW**.
- Demonstrated personal accountability with **Agile** methodologies, adapting to daily workflows and team priorities.

Digital Transformation Intern July 2025 – September 2025
Brisa Bridgestone Sabancı, Izmit/Kocaeli

- Streamlined software workflows and **change management**, coordinating task resolution via **Jira** and **Bugzilla**.
- Executed strict integration testing for **REST** and **SOAP** services using **Postman** and **SoapUI**.
- Authored **technical documentation** for 35+ APIs, establishing standardized testing protocols aligned with corporate IT governance.

Software Engineering Intern July 2024 – September 2024
Smartera Software Solutions, Istanbul

- Developed distributed, high-availability backend services utilizing **Java** and **Spring Boot**.
- Applied **Test-Driven Development (TDD)** to enforce quality assurance and write maintainable code.
- Integrated **Docker** into the **SDLC** to standardize environments and comply with deployment security protocols.

Projects

Ransomware Simulation & Cybersecurity Analysis

- Architected an isolated malware sandbox via **VirtualBox**, utilizing Windows 10 and **REMnux v7** VMs to detonate **WannaCry**.
- Configured **INetSim** to emulate DNS/HTTP(S), capturing live network packets and lateral movement via **Wireshark** and **tcpdump**.
- Performed forensic analysis utilizing **Sysinternals (Procmon, Regshot)** to trace process injection, encryption, and registry modifications.

DNS & Mail Server Administration (IT Infrastructure Security)

- Deployed secure network services on **Linux**, configuring firewall and routing rules to mitigate infrastructure risks.
- Managed DNS infrastructure by establishing precise zone files and routing records (**A, MX, CNAME, TXT**).
- Configured a mail server ecosystem, implementing **SPF, DKIM, and DMARC** protocols.

Tech Stack

Cybersecurity & IT Risk: Malware Analysis, REMnux, Wireshark, INetSim, Sysinternals (Procmon, Regshot), DNS/Mail Security (SPF, DKIM, DMARC)

Data Engineering & BI: Microsoft Fabric, Power BI, SAP BW, SQL Server, ETL Pipelines

System Architecture & Backend: Distributed Systems, Java, Spring Boot, REST, SOAP, TDD

IT Governance & Tools: Linux, Docker, Git, Jira, Bugzilla, Postman, SoapUI, Swagger (OpenAPI)

Languages

Turkish: Native
English: Proficient

Affiliations

Sabancı Foundation Scholar
